MEDIAS data call

.... on going

Eggs&Larvae database structure [*html*](#), [*pdf*](#)

Integration within RDBFIS

Validation scheme *.. to be done*

Consistency check (*R*) *.. to be done*

Processing (*SQL/R/Java*) *.. to be done*

*A **workshop** with experts is expected to be organized, with the aim of discussing and improving the db structure to meet contemporary needs*

Initial proposal

... **but:** a) there are commission policy issues regarding data,
b) is a much bigger task to alter the stringent institutional security bureaucracy

Establishment of the Regional Database for the Mediterranean and Black Seas

Acronym: Med&BS RDBFIS-III

Under FRAMEWORK CONTRACT – EASME/EMFF/2020/OP/0021

Framework Contract for the provision of scientific advice
for the Mediterranean and the Black Seas

Specific Contract CINEA/EMFAF/2024/3.1/01/SC08

Contractor: Hellenic Centre for Marine Research (HCMR)

Specific Contract Project Coordinator: **Dr. Irida Maina (HCMR)**

Scientific Information Technology Coordinator: Stefanos Kavadas

Duration: 13 months and 21 days

Project Start: April 1st 2025

During the project implementation, twelve activities will be carried out to support the following eight objectives:

O1. database maintenance and restructuring

O2. enhancement and optimization of the existing programming code (Update/revision of existing data quality tools, tools4MCDA, spatial visualization, Improvement and further development of the existing validation scheme and consistency checks)

O3. common raising procedures for the Med&BS biological data

O4. development of new software packages (Development of data quality tools: MEDIAS, stat4RDBFIS software Package development)

O5. integration within RDBFIS of the existing sampling optimization package

O6. fleet analysis updates and improvements on FDI spatial checks

O7. integration within RDBFIS of the outcomes of MAPAFISH project

O8. Fine-tuning

Activity 3, objective 4: Development of data quality tools

Duration: 7 months (May 2025 to November 2025)

During the implementation of RDBFIS II, and based on feedback from MEDIAS experts, a robust validation scheme have been developed for acoustics processing data, trawl pelagic samples, and CTD casts. In this project (RDBFIS III), we will focus on refining and enhancing the existing R code for the data quality (consistency check). The package will be seamlessly integrated into the RDBFIS system.

*Depending on your availability, a **workshop** is expected to be announced next week, aiming to meet in **May or early June** to define the consistency checks to be included in the package.*

- *With the support of National Correspondents and DCF experts, the system is evolving into a highly effective tool for the Med&BS RCG, Member States, users authorized by the National Correspondents and other potential end users (e.g. STECF).*
- *Furthermore, new features are set to be integrated, highlighting it as a state-of-the-art fisheries information system for the Med&BS. As the system will continue to operate in the future, is a major achievement for Member States to promote its use and support the further development.*
